

Vegan Formula, Where Does the Protein Come From?

HERE'S HOW WE MASTERED THE FORMULAS, we took ultrafine brown rice protein and blended it with sacha inchi, quinoa, chia, flax, amaranth, and spirulina to provide your body with all 9 essential amino acids, as well as many non-essential and conditionally essential amino acids. These ingredients are all easy to assimilate and have an alkalizing effect on your body. Then we added pea protein to the mix in order to create a complete protein source with high levels of two very important amino acids: lysine and methionine. This is significant because these two essential amino acids are very difficult to consume at adequate levels in most plant-based diets. And while crafting this proprietary plant-based protein blend might sound easy, it truly is a rare feat. Two delicious vegan flavors to choose from: Tropical Strawberry Shakeology, with the taste of sweet strawberries, smooth bananas, luscious papayas, and tangy pineapples, this light and refreshing shake is both delicious and nutritious. Chocolate Vegan Shakeology Crafted with rich cacao, 5 new superfoods, 5 grams of fiber, and no added fructose, this healthy shake is a chocolate lover's dream come true.
